

Technology that works. Confidence that lasts.

Practical technology, cybersecurity and skills for growing organisations. Equip your team, strengthen everyday security and get dependable support from SekoTech.

Illustrative generated business environment; not a photograph of actual premises or employees.

A practical partner for your next step

Seko Mining Tech, trading as SekoTech, brings business technology and hands-on learning together. Our approach starts with the people who use a system every day: clear advice, a considered specification and support that makes the next step understandable. This demonstration presents our technology, cyber academy and digital services offering for commercial, industrial and mining supply businesses.

Kitwe and the Copperbelt, with remote technology support and training by arrangement across Zambia and Namibia.

Products & services

Workplace technology

Business laptop - 14 inch

A portable everyday workstation for office teams, field reporting and video meetings. We help match memory, storage and connectivity to your working day.

Engineering workstation

A considered desktop specification for design review, technical documents and demanding business applications. Software compatibility is checked before supply.

Compact office desktop

A space-saving desktop for shared offices, administration and reception. Specify the peripherals and support you need as one practical package.

USB-C workspace dock

Connect your laptop to a consistent desk setup with display, network and everyday peripherals. Device compatibility is confirmed before recommendation.

27-inch business display

Give spreadsheets, drawings and online meetings room to breathe. A practical monitor option for comfortable everyday work.

Networks & resilience

1500 VA line-interactive UPS

Protect essential office equipment against short interruptions and provide time for a controlled shutdown. Runtime depends on the connected load.

24-port managed network switch

A manageable foundation for a growing office network. We help plan port counts, uplinks and segmentation before installation.

Business wireless access point

Consistent wireless coverage starts with the right placement and capacity plan. Suitable for offices, training rooms and supported business spaces.

Entry rack server

A right-sized platform for supported on-site applications and shared services. Capacity planning and backup design form part of the recommendation.

Network backup appliance

Create a considered local backup destination for supported workloads. Recovery planning and an independent copy remain essential.

Backup & recovery review

Check that your backup arrangements support the recovery your business actually needs. Build a realistic, documented restoration exercise.

Office network design

Plan reliable connectivity before expanding the office. Translate user needs into a clear network layout and installation scope.

Business Wi-Fi survey

Identify coverage gaps and capacity needs in your office or training environment. Recommendations are based on an agreed survey scope.

Cybersecurity

Small-business security gateway

Bring internet access controls and network boundaries into a manageable configuration. Supply includes a clear discussion of licensing and support options.

Endpoint protection subscription

A managed licensing option for supported business devices. Coverage, renewal dates and response responsibilities are agreed before deployment.

Cybersecurity health check

Understand your most useful security improvements through a focused review of everyday controls, access and recovery arrangements.

Vulnerability assessment

Review an explicitly authorised technical scope and turn findings into a manageable remediation plan. Testing boundaries are agreed in writing first.

Microsoft 365 security review

Review account protection, access settings and email security for your existing Microsoft 365 environment. Changes require your explicit approval.

Incident response readiness

Agree who acts, who communicates and what evidence to preserve before an incident occurs. Rehearse decisions through a guided tabletop exercise.

Digital services & academy

Managed business IT support

Give staff a clear support route and keep everyday technology work organised. Scope, working hours and escalation are agreed for your business.

Cloud migration planning

Assess application dependencies, access and continuity before moving a workload. A practical plan makes responsibilities and risks visible.

Website care & digital support

Keep an existing business website maintained through an agreed care scope. Hosting, ownership and approval responsibilities stay clear.

Cyber awareness workshop

Help staff recognise suspicious messages and respond confidently. Practical examples and discussion make security relevant to everyday work.

Business productivity training

Build confidence with everyday documents, spreadsheets and collaboration tools. Sessions are adapted to the team's starting point.

How we work

1. Clarify your requirements

Agree the intended outcome, timing, location and responsible contacts.

2. Confirm the scope

Review suitability, responsibilities and the quotation before work begins.

3. Deliver with a clear handover

Record agreed checks, explain the next steps and keep approval points visible.

Illustrative engagements

Secure office rollout

Demonstration example: a fictional 28-person distributor consolidates device setup, network segmentation and staff awareness into a phased office rollout.

Kitwe, Zambia - A documented device baseline, clear support responsibilities and a practical handover checklist.

Cyber academy learning cohort

Demonstration example: a fictional mixed-experience administrative team practises phishing recognition, account protection and safe file sharing.

Remote / Namibia and Zambia - Guided exercises and an agreed follow-up learning plan. No external accreditation is claimed.

Recovery rehearsal

Demonstration example: a fictional professional-services office tests recovery of an agreed document set and records the lessons.

Copperbelt, Zambia - A repeatable restoration checklist with named responsibilities.
